

QuickSlide Clearview panel systems

Need to contain a process, maintain a controlled environment – all with quick access?
Choose Soper's QuickSlide Clearview Panel System

The QuickSlide system helps keep heating / cooling costs down and eliminates cross contamination (fumes, dust, noise, overspray), yet permits easy access to processes in heavy traffic environments. Efficiently. Cost effectively.

QuickSlide's rugged electro-pneumatic mechanism opens smoothly in response to a photo-cell sensor. (Alternative automatic or manual options are also available.) The 50 per cent overlapping clearflex PVC strips provide a fail-safe barrier enabling immediate access (or exit) – even during a power failure.

Features

- Clear PVC strips are typically 12" wide x 1/8" thick and fully overlap to create a double thickness barrier.
- Two heavy-duty pneumatic cylinders open and close the clearflex panel, in response to remote sensors. (Options include: photo-cell, trip cord, sensor mat, manual pull rope, etc.)
- A flow control valve controls opening and closing speed.
- QuickSlide's rugged structural frame consists of 4"x4" tubular vertical and horizontal supports, primed and painted.
- Though a 10.0' unit (7.0' W x 8.0' H working clearance) is standard, Soper's can build one with working clearances up to 8.0' W x 9.0' H.
- Individual orange safety strips are added at the outer edges to identify post clearances.
- Order optional amber strips to cut out harmful UV rays in welding operations.

Soper's retractable QuickSlide units can be large or small. This installation measuring 8' H x 10' W is both a sound barrier and a retractable access door to accommodate material handling logistics.

Applications

- For climate control, installing a QuickSlide unit inside enables leaving the exterior door open during working hours for fast and easy access while conserving hot or cool air within.
- Installing QuickSlide inside enables access to areas enclosed for grinding, welding or other operations that generate noise, dust, fumes or over-spray.
- Facilities like walk-in freezers and clean(er) rooms – where the air has been conditioned by cooling or filtering – are perfect for the QuickSlide Panel System.
