

Case Study

Soper's Retractable Curtain Reduces Paint Fumes at Aircraft Hangar

Workers at a local aircraft hangar had a problem with paint fumes. To solve this problem, Soper's provided a 35' high retractable curtain system manufactured of vinyl coated polyester complete with several clear PVC windows.

The retractable curtain improves overall air quality by containing the paint fumes so that they can be exhausted by a mechanical air filtration system that simultaneously circulates clean air into the painting area.
