

Case Study

Soper's Retractable Enclosure Solves Dust Problem at Nickel Mine

Moa Nickel, an open pit mine located in Cuba, required a custom-designed enclosure system to help control the dust from its sandblasting operations.

Soper's provided a retractable SoftWall enclosure measuring 10' wide X 9' high X 36' deep; when not in use, the enclosure can be retracted to a fraction of its extended size.

A retractable curtain (with a clear PVC window) was installed on the front of the enclosure. This allows for a completely enclosed environment while maintaining easy access.

...a cleaner, healthier work environment
