

Case Study

Soper's Retractable Roof Creates "Cleaner" Room

Siemens' Hamilton facility required "cleaner" conditions to dismantle, clean, and reassemble large generator rotors. The challenge was to not compromise overhead crane access needed to move the large rotors (some measuring up to 40' long and weighing 140 tons).

Soper's custom-designed, manufactured, and installed an 18' X 52' retractable fabric roof above the work area., thus creating a "cleaner" room. Further, the fabric roof can be retracted to allow full overhead crane access.

...an innovative solution for a unique problem
