

SoftWall Enclosures & Partition Systems and Custom Fabric Solutions

SoftWall Enclosures

Stationary Enclosures

Modular and custom built enclosures ideal for work stations, grinding booths, assembly areas, and blackout inspection booths.

Retractable Enclosures

Accordion-style enclosures that retract to a fraction of their extended size to free up valuable floor space. Ideal when beam cranes require unobstructed overhead space.

Cleanrooms & Clean Tunnels

From "cleaner" rooms to "spec'd" clean room classifications, create positive air pressure environments with these enclosures. Ideal for paint rooms, packaging booths, assembly stations, transfer tunnels, and integrating controlled processes.

SoftWall Partition Systems

Floor to ceiling partitions to divide an entire facility, enclose temperature-sensitive environments, separate shipping/receiving from manufacturing, section off different product categories or work process, or temporarily subdivide and sublet a facility.

Curtains & Strip Curtains

Retractable Curtains

Intermittently enclose or section off areas in your facility to create welding areas, wash bay areas, spray booths, and more.

Suspended Hoods

Suspended "curtains" to contain and control truck exhaust, dust, fumes, and other airborne particles.

Clearflex Strip Solutions

Overlapping strips control temperature, welding flash, dust & fumes, and noise while allowing for easy access for people and equipment.

Outdoor Curtains

Curtain systems to extend or enclose outdoor storage areas and exterior equipment & machinery.

Distributed by:

SoftWall Noise Control

Noise Enclosures

SoftWall enclosures to reduce noise by segregating noisy operations and enclosing noisy machinery & compressors.

Noise Partitions

SoftWall partitions to reduce noise by isolating noisy operations or equipment, dividing an entire facility, and creating in-plant quiet areas.

Noise Panels & Baffles

Reduce noise by attaching fabric panels to existing fencing, walls, and mezzanines and by hanging acoustical baffles from the ceiling.

Fabric Air Ducts

Versatile fabric ducting for air makeup, air distribution, and temperature & humidity control.
